

Cage KinetiCore

How to change the cheek pads

1. The Cage KinetiCore helmet comes with a set of thinner spare cheek padding in the box.

2. These can be exchanged with the standard thick cheek pads to adjust the fit of the helmet according to the rider's comfort preferences.

3. The cheek pads are attached to the helmet via 3 mushroom mounts.

4. To remove each pad, grab it and pull it away from the helmet until the mushroom mount pops out of its basket.

5. Repeat this for each mushroom basket, then repeat on the other side.

6. To install the thinner cheek pads, align the mushroom with the mushroom baskets and firmly push them in.

7. Ensure all 3 mushroom mounts are securely connected, then repeat on the other side.

8. Thick pads give a more secure and tighter fit for a more confident feeling.

9. Thinner pads allow more ventilation and an open feeling when the helmet is being worn.

10. Additional spare padding sets are available through your local distributor based on availability.
